

NC527CR TF

LEADING EDGE CLUBROOT RESISTANCE

Utilizing high yielding Nuseed genetics, NC527CR TF now combines the most current multigenic traits for clubroot resistance. A medium-late maturing variety with great harvestability characteristics

MATURITY: Medium-Late (Nuseed Group 5)

HEIGHT: Tall

SEED COLOR: Black

DISEASE PACKAGE

BLACKLEG: Multi-gene Resistant

FUSARIUM WILT: Resistant

KEY FEATURES

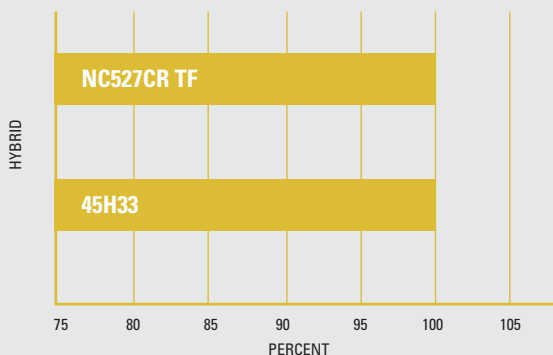

TruFlex™ Canola with
Roundup Ready® Technology

Multigenic clubroot resistance

High yielding

Excellent harvestability

YIELD % OF 45H33 - 14 LOCATIONS

"Clubroot is a devastating disease which severely limits yield potential for canola. NC527CR TF will not only allow growers impacted by clubroot to grow competitive crops but will help to minimize the spread across the prairies."

SEED TREATMENT

NC527CR TF is treated with Prosper EverGol to protect your seed investment against early season disease and insects.

TruFlex™
CANOLA with Roundup Ready® Technology

IMPROVED CONTROL OF TOUGH WEEDS

The flexibility of the TruFlex canola system will allow for the control of harder-to-kill weeds like Canada thistle and wild buckwheat.

FLEXIBILITY IN SPRAY RATES AND TIMING

TruFlex canola will have a wider application window as compared to Roundup Ready® canola. If weather or a late flush of weeds delays your spray date, no problem – you will be able to spray up to first flower* when applying sequential rates of 22 fl oz/ac. The TruFlex canola system also enables flexibility with your Roundup PowerMAX® herbicide application rate to help get the job done.

*First flower is when 50% of the plants in the field have no more than one flower.

HIGHER YIELD POTENTIAL THROUGH GENETICS AND CROP SAFETY

New genetics have packed a lot of yield potential into each TruFlex canola seed. New advances in trait technology will help enable better weed control and crop safety compared to Roundup Ready canola. It's a combination that could give you the opportunity to see much more yield potential at harvest time.
