

MULTI-CROP USE

MicroMatrix

MicroMatrix is a complete foliar nutrition tool designed for row crops. By combining essential micros (Mn, Cu, Zn, Mg, Fe, B) with nitrogen, potassium, and sulfur, it delivers balanced nutrition that crops need throughout the season. The amino acid chelation makes these nutrients more available, more mobile, and more effective than traditional forms

KEY BENEFITS

- **Covers hidden hunger:** A balanced blend of micros (Mn, Cu, Zn, Mg, Fe, B) plus N, K, and S provides complete nutrition to support crop growth and yield
- **Different than EDTA:** Amino acids naturally chelate nutrients, making them easier for the plant to absorb and keeping them available even in tough soils (high pH or salts)
- **Superior foliar performance:** Because amino acids are plant-friendly, nutrients move quickly into the leaf and throughout the plant, leading to faster correction of deficiencies and stronger crop response

IMPACT ON THE PLANT

- Builds stronger roots and stalks for standability and nutrient uptake
- Supports pollination and seed set for more kernels per ear and pods per node
- Improves grain fill and test weight through enhanced photosynthesis
- Helps plants tolerate stress and maintain yield potential

APPLICATION

Can be applied at any growth stage when crops need additional micronutrient support.
For best results 16 oz/acre:

Corn
V4–V8 and again at VT–R3

Soybeans
V3–V5 and R1–R3

Wheat/Small Grains
Tillering through flag leaf

PACKAGING

- 2.5 gal.
